

Testimonial Mamiko Inamori

“Brainport identity, a place where innovation, creativity, and people come together.”

1. Please briefly introduce yourself.

I'm Mamiko Inamori, Associate Professor and Deputy Program Director at the Graduate School of Science and Technology of Tokai University. I research wireless communications and wireless power transfer. In June 2025, I joined the SmartCom 2025 international workshop at TU/e as part of the technical program team.

2. What was your first impression of Eindhoven?

Eindhoven felt open, friendly, and very modern. I noticed how the city combines technology, design, art, and a strong human-centered atmosphere. The public art, the modern design around the city, and the visits to TU/e and the High Tech Campus made me feel the unique Brainport identity, a place where innovation, creativity, and people come together.

3. What surprised you most about Eindhoven during your visit?

I was pleasantly surprised by the warm, supportive atmosphere. From the sessions to the banquet at the Philips Museum and the demos at the High Tech Campus, everything was smooth and well organized. I truly felt welcome.

4. What made your experience in Eindhoven different from other Dutch cities?

I've visited the Netherlands several times, but this was my first time in Eindhoven. The city was easy to navigate, with smooth airport access and TU/e and the Philips Museum close to the station. I also enjoyed the local market and dinners with colleagues, and I hope to return someday with my family.

5. Would you recommend Eindhoven to others, and why?

Absolutely. Eindhoven is an inspiring, easy-to-navigate city where technology, creativity, and hospitality meet. My experience deepened my love for the Netherlands, and I highly recommend it to anyone seeking an innovative and welcoming city.
